

Flexible and sleek design. Features a socket fixed base which provides additional stability in high footfall areas. Ideal for airports, train stations, shopping centres and a variety of other applications. Indoor and outdoor options available.

889R-STD – Advance Post with Socket Fixed Base 2.3m
889R-MAX – Advance Post with Socket Fixed Base 3.65m

- The advance post with socket fixed base features a high quality steel post with a hard wearing stainless steel spigot base - preventing corrosion underground.
- The receiving socket is fixed in place into a core drilled hole. This is then filled with a rubber O-ring to create a seal around the base of the spigot. Simply slot the post into the receiving socket to create a stable queue barrier.
- During times of low footfall, post can be easily removed and receiving socket can be filled with corresponding plug and locked in place.
- Plug fits flush to the floor to prevent trip hazards or heels and other objects being caught in receiving socket.
- The safest barrier on the market – our cassettes have a unique braking system for slower webbing retraction.

- Metal post available in a range of powder coated colours or metal finishes.
- 316 Marine grade steel available for outdoor use.
- Available with any Tensator® standard (50mm) wide webbing options.
- Modular webbing cassette – all cassettes come as standard with our four-point anti-tamper webbing connectivity. This allows you to connect other Tensabarrier® products to the receiver splines on the cassette head.
- Comes as standard with anti-tamper tape end, socket plug and key.
- Compatible with all Tensabarrier® accessories including our range of post top signage and wall clips.
- Installation and drilling of floors is required.

- Enhance and manage queuing spaces.
- Provide added stability in areas with established traffic patterns.
- Ideal for a variety of applications including: airports, train stations, ticket offices, shopping centres, amusement parks, tourist attractions.

Six tape end options available
